

FEATURES

- 6 sided Continuous Shielding
- Synchronization and Output Trim
- 12.5W/In³ Power Density
- Efficiency to 87%
- UL 1950 Approved
- CSA 22.2-950 Approved
- VDE / EN 60950 Approved

DESCRIPTIONS

The 2100 series 20 watts high performance DC/DC converters are cost effective solution to the high reliability and performance requirements of power distribution systems in applications ranging from high speed data communications equipment to industrial robotic systems. The 2100 series operates over 2:1 input voltage ranges of 10 to 18, 18 to 36 or 36 to 72VDC; providing single, dual and triple output combinations of 5, 12, 15, ± 5 , ± 12 , ± 15 , 5/ ± 12 and 5/ ± 15 VDC. All models are packaged in compact, low profile 2" X 2" X 0.4" metal cases.

OUTPUT VOLTAGE ADJUSTMENT (2100 SERIES - SINGLE OUTPUT)

The converter's output voltage may be trimmed by up to $\pm 10\%$ of the nominal output voltage.

TRIM UP (Case A)

Trim output voltage up by connecting an external resistor between Pins 5 and 6. Use the following equation, reference Table 1 for variables A.

$$\text{Radj-up} = \frac{A}{\Delta \%} - 24 \text{ (k}\Omega\text{)}$$

Example:

Trim both outputs 5% up for 12V Output units, where $A = 1.98$, $\Delta \% = 0.05$

$$\text{Radj-up} = \frac{1.98}{0.05} - 24 \text{ k}\Omega = 15.6 \text{ k}\Omega$$

Table 1.

Output Voltage	A
5V	1.24
12V	1.98
15V	2.07

TRIM DOWN (Case A)

Trim output voltage down by connecting an external resistor between Pins 7 and 5. Use the following equation, reference Table 2 for variables C and D.

$$\text{Radj-down} = \frac{C}{\Delta \%} - D \text{ (k}\Omega\text{)}$$

Example:

Trim 4% down for 5V Output units, where $C = 1.24$, $D = 26.5$, $\Delta \% = 0.04$

$$\text{Radj-down} = \frac{1.24}{0.04} - 26.5 \text{ k}\Omega = 4.5 \text{ k}\Omega$$

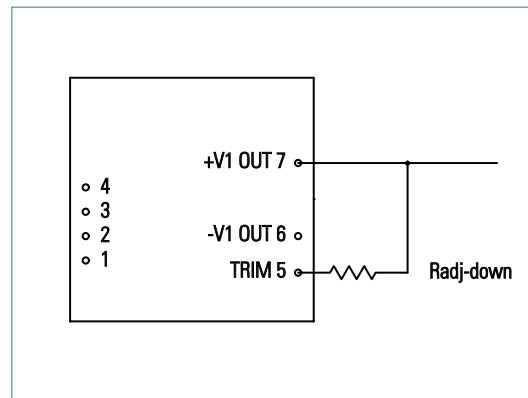

Table 2.

Output Voltage	C	D
5V	1.24	26.5
12V	7.57	33.5
15V	10.3	36.4

OUTPUT VOLTAGE ADJUSTMENT (2100 SERIES - DUAL OUTPUT)

The converter's output voltage may be trimmed by up to $\pm 10\%$ of the nominal output voltage.

TRIM UP (Case A)

Trim output voltage up by connecting an external resistor between Pins 5 and 8. Use the following equation, reference Table 1 for variables A.

$$\text{Radj-up} = \frac{A}{\Delta \%} - 24 \text{ (k}\Omega\text{)}$$

Example:

Trim both outputs 5% up for 12V Output units, where $A = 1.98$, $\Delta \% = 0.05$

$$\text{Radj-up} = \frac{2.23}{0.05} - 24 \text{ k}\Omega = 20.6 \text{ k}\Omega$$

Table 1.

Output Voltage	A
5V	1.87
12V	2.23
15V	2.28

TRIM DOWN (Case A)

Trim output voltage down by connecting an external resistor between Pins 5 and 8. Use the following equation, reference Table 2 for variables C and D.

$$\text{Radj-down} = \frac{C}{\Delta \%} - D \text{ (k}\Omega\text{)}$$

Example:

Trim 5% down for 5V Output units, where $C = 5.63$, $D = 31.5$, $\Delta \% = 0.05$

$$\text{Radj-down} = \frac{5.63}{0.05} - 31.5 \text{ k}\Omega = 81.1 \text{ k}\Omega$$

Table 2.

Output Voltage	C	D
5V	5.63	31.5
12V	19.3	45.5
15V	25.1	51.4

DERATING CURVES

MODEL 2100 - 20W, 5VDC

MODEL 2100 - All other models

**Notes:**

1. The derating curves shown for the 2100 series represents ambient operating conditions. They assume that good thermal design practices are being used, including sufficient space in the vicinity of the converter for good air circulation. There are certain alternate techniques that can be utilized when the ambient temperature reaches the upper limit of a particular model:

- a. Using a heat sink.
- b. Mounting the converter on a metal plate which acts as a heat sink.
- c. Cooling by forced air.

Any of the above methods (or a combination of heat sinking and forced air) will increase the operating range of the converter up to 85°C maximum ambient temperature. However the baseplate (case) temperature must not exceed 115°C for more than one minute under any conditions.

2. External Synchronizing - All models in the 2100 series (packaged in the standard "A" case) can be synchronized to an external clock by driving the SYNC pin (pin 2) directly with open collector-open drain (1 TTL load). The driving signal frequency must be 220kHz, +/- 5% (20% low, 80% high duty cycle).

3. Although all models feature internal short circuit protection, it is recommended that their inputs be protected externally with a fuse. The fuse used must be a Slow-Blow type. Recommended rates are shown in the far right column of the model selection guide.
